Figure S3. The nucleotide sequence and amino acid translation of sea bass IL-4/13B. Start and stop codons, and in frame stop codon before the main ORF are underlined; ATTTA motifs are in bold and underlined; potential N-glycosylation sites are underlined.

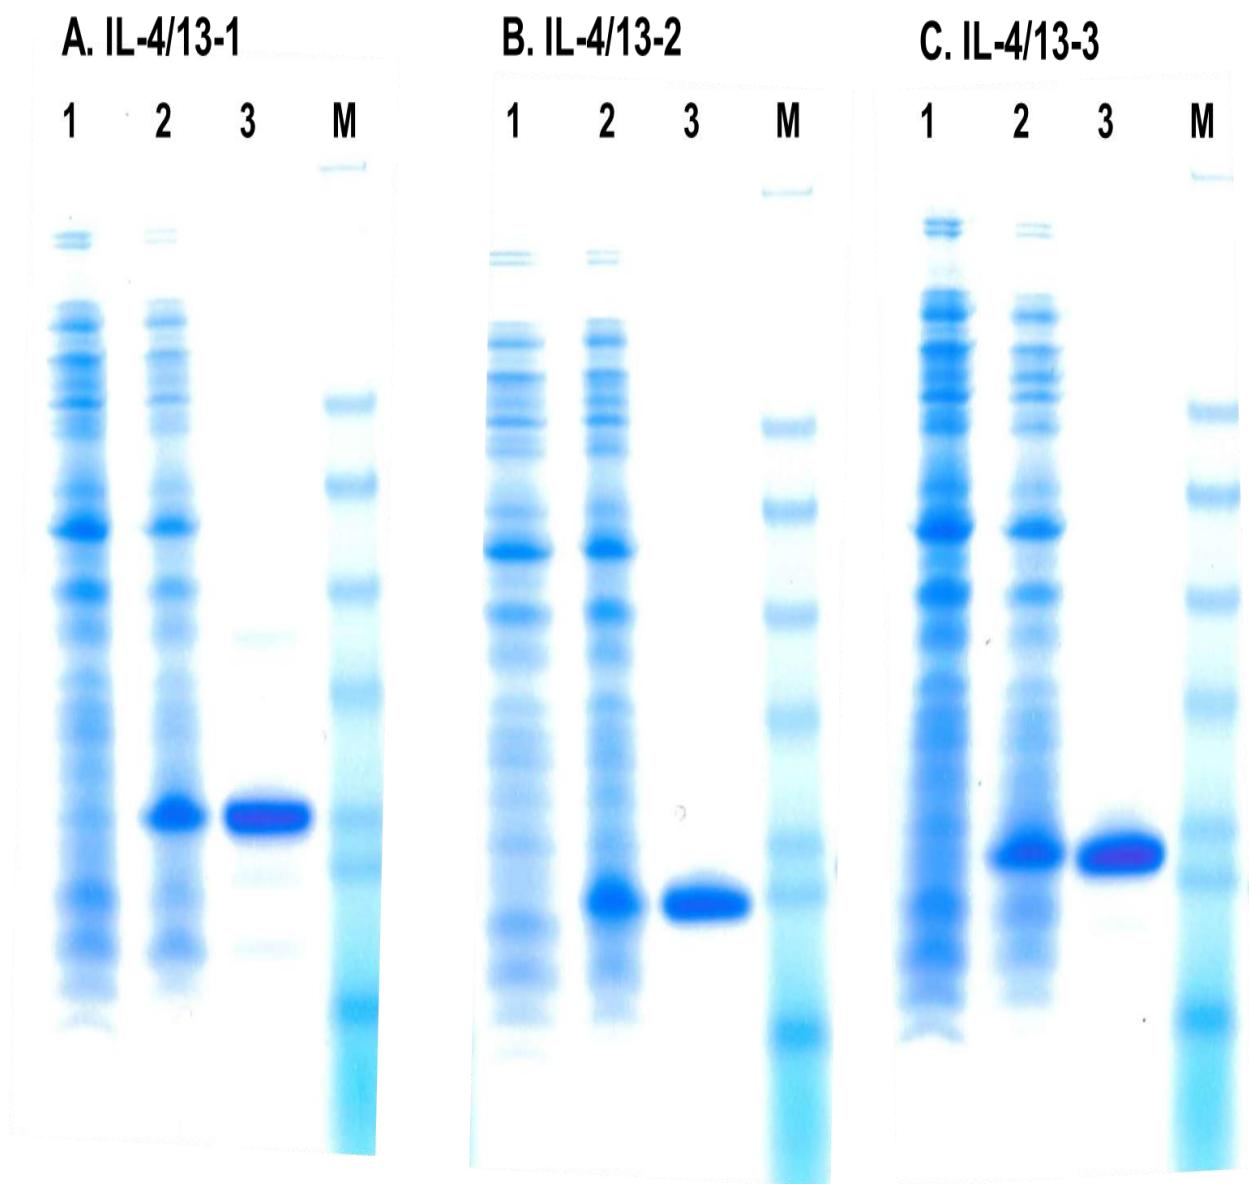

Figure S4. SDS-PAGE analysis of seabass rIL-4/13 isoforms expression and purification from *E. coli* BL21 Star (DE3). The SDS-PAGE gel was stained with SeeBlue (Invitrogen). Samples loaded in the different lanes: 1: a sample from un-induced BL21 cells; 2: BL21 transformed by IL-4/13-expressing plasmid and induced with 1 mM IPTG for 4 h; 3: expression product purified from transformed cells expressing IL-4/13 isoforms; M: Protein marker, SeeBlue (Invitrogen); IL-4/13-1 = IL-4/13B; IL-4/13-2 = IL-4/13-A1; IL-4/13-3 = IL-4/13A2.
