

Supplementary table 2: Patients with survived fulminant forms: Baseline characteristics of patients with versus without persistent left ventricular systolic dysfunction

	Fulminant forms surviving to the acute phase (N=23)	Fulminant forms with persistent LV systolic dysfunction (N=6, 26%)	Fulminant forms without persistent LV systolic dysfunction (N=17, 74%)	P
Baseline LVEDD (mm)	54±10	58±5	52±11	0.177
Baseline LVEF (%)	22±8	22±3	22±9	0.956
LVEF at discharge (%)	47±14	29±5	54±9	<0.001
LVEF at discharge ≥ 50%, n (%)	15 (65)	0	15 (65)	<0.001
Poor (vs. moderate to plentiful) lymphocytic infiltrate, n (%)	4 (17)	3 (50)	1 (6)	0.03
Immunosuppressive therapy n (%)	18 (78)	5 (83)	13 (76)	0.726

LVEDD, left ventricular end-diastolic diameter; LVEF, ejection fraction.
