Keywords: NHC-gold(I) complexes; TrxR1 activity, antiproliferative effect, cancer cells

Figure S1. Original Western blot images.

Figure S2. Trx1 activity in vitro. Human recombinant Trx1 was incubated with different concentrations of Au3BC, Au4BC and auranofin. Trx1 activity was assayed in presence of insulin and DTT at 25°C for 30 min. Aurothiomalate was used as Trx1 inhibitor positive control.
